Backend: Express

Node JS – Express and React

The following exercise contains the following subjects**:**

- **express**
- **react**

Instructions
API:

- Look for an api that displays the weather by location.

Order of operations:

1. Create express app.
2. Make a **GET** request that receive a specific location, fetch the data from the API and it send back.
3. Check your route in postman.
4. Connect express with your react app.
5. Send a "get" request to our back-end server from our react app to get the weather of the users input.
6. Display the weather in our react app.
